
SOLUTIONS

VPS Hosting

Affordable VPS Hosted in Singtel (Singapore Datacentre)
Hosting Services backed by 100% Network

Powered by:

HOSTSG
Global Hosting Solution

Privatized Data:

Resources for your Growth

- Finally a solution that focuses on the privacy of your data.
- The solution that provides you the added resources and flexibility, upgrading from shared hosting, and provides your data the security it deserves.

1

ROOT ACCESS

Flexibility and better freedom

Not all businesses are the same and therefore not all require the same type and amount of resources or software use, this is where root access has its value. Rather than wasting space and hardware capacity, root access allows control over the things you put into your VPS.

Edge: Allows you to install what you need with greater freedom and greater range of flexibility.

2

CONTROL PANEL

User-friendly function consolidation

In order to increase the ease of use of the platform, control panels are available, This means set up and tweaks are made easier..

Edge: Control panels exist to be able to consolidate many VPS functions in one location creating a more user-friendly environment.

3

PRIVATE SPACE

Secure space only for the user

How valuable is the data? Unlike shared hosting the added privacy ensures additional security. VPS uses software to create private space for your data.

Edge: Increased data privacy and security ensuring vital information is kept safe and private.

4

MULTI-HOMED NETWORK

100% Network Uptime

A multi-homed physical network with more than 6 top-tier network connections provide layers of redundancy, and better network paths for data to go through.

Edge: Faster data transfers between locations because of added top tier networks. Redundant connections ensuring 100% network uptime.

Top Tier Connections: SingTel (Global), SingNet (SG), NTT (JP, US), PCCW (HK, CN), DTAG (EU), HE (US)
